gantt

Gantt chart — task bars across a date axis.

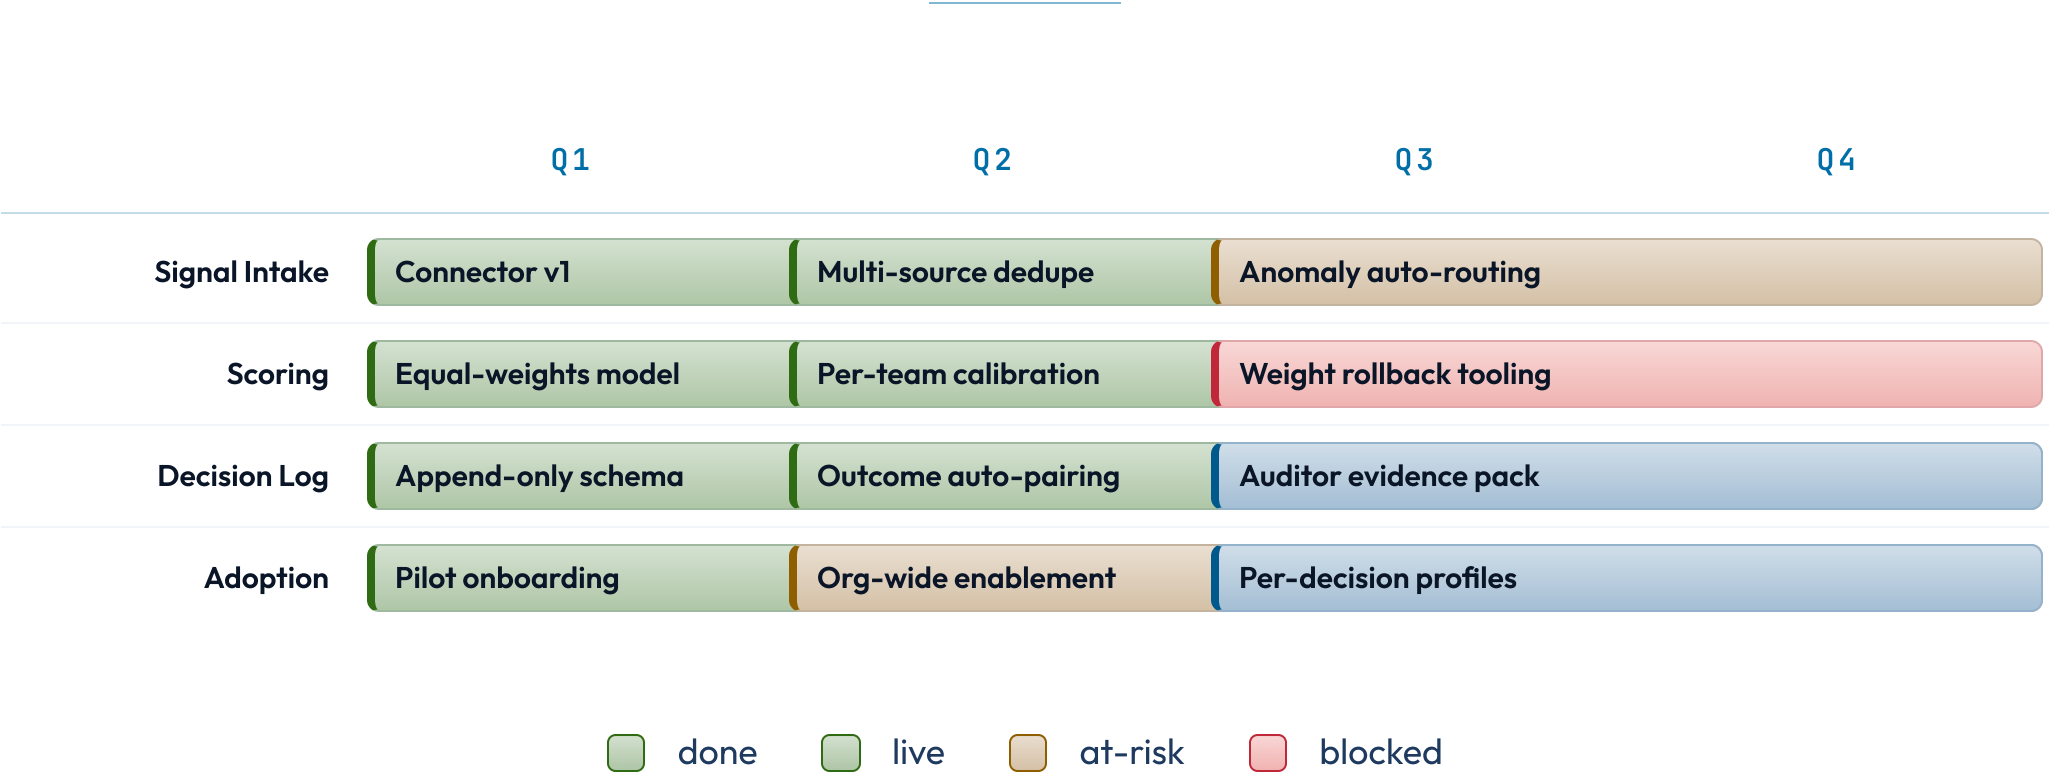

What ships in each phase, by workstream.

Three workstreams across four quarters; the one at-risk bar quietly gates the rollout, GA is a milestone, and the today line marks where the plan stands.

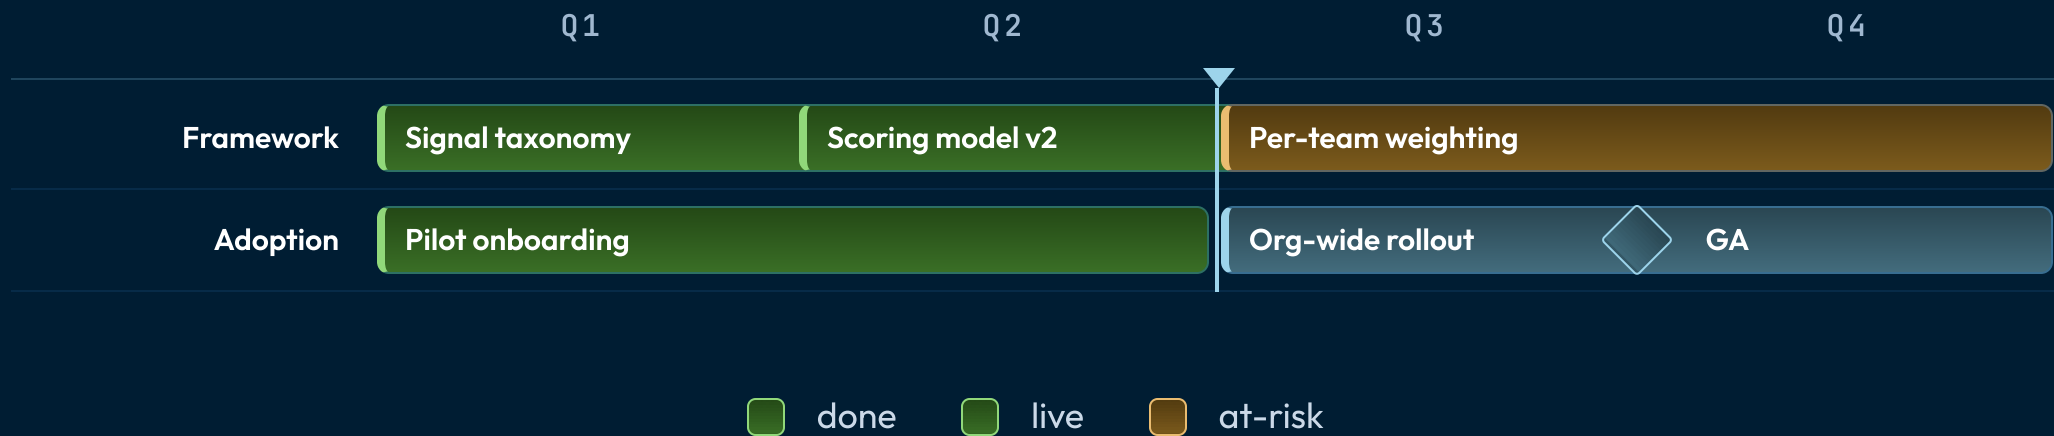

2026 Q1 .. 2026 Q4

Stress test — four workstreams, twelve tasks, one recalibration bar nobody wants to own.

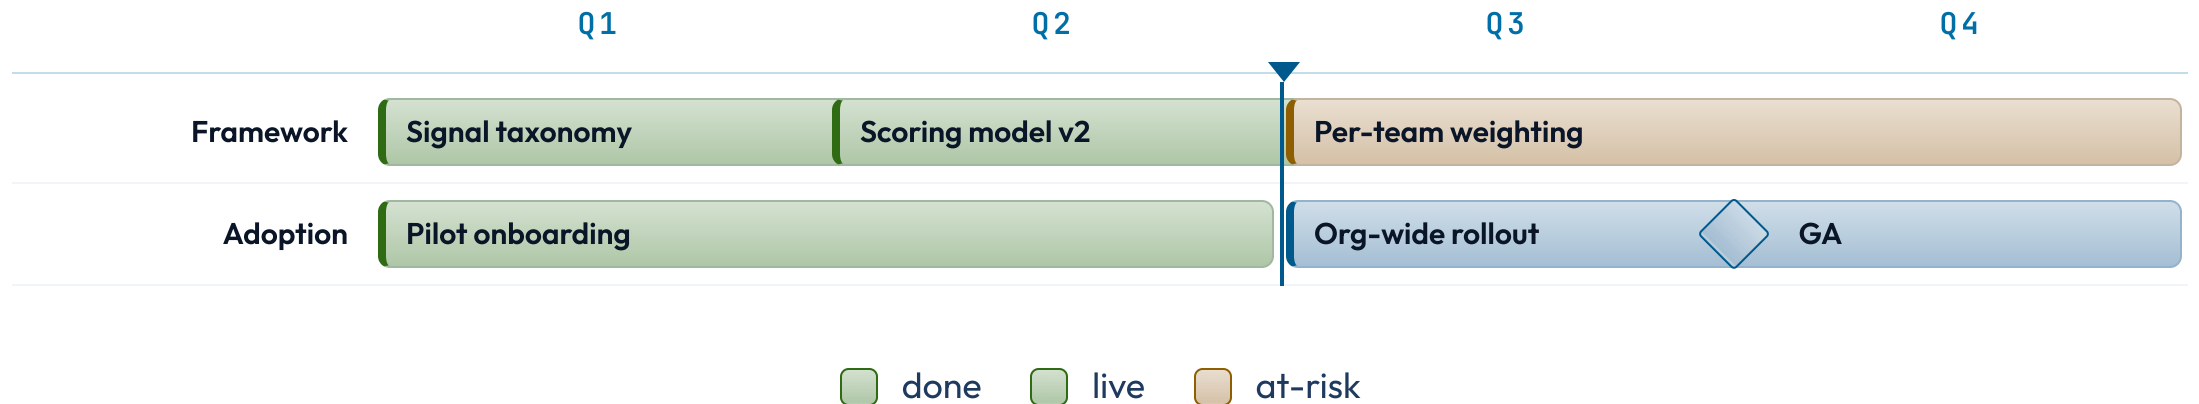

What ships in each phase, by workstream.

Three workstreams across four quarters; the one at-risk bar quietly gates the rollout, GA is a milestone, and the today line marks where the plan stands.

When NOT to reach for gantt.

Single One lane of bars is a timeline, **workstream.** not a gantt. Use `timeline` or `list-steps` when there is no parallel work to coordinate.

More than Past five workstreams the bars compress and the labels crowd. Group lanes (collapse **five lanes.** 'SDK' subdomains into 'SDK') or split into two slides.

No A gantt mixes bars with the odd milestone **spans** — but if every task is a point-in-time event `timeline` or `roadmap milestones`. gantt earns its chrome **at all.** with no durations, use only when bars carry meaningful length.

RELATED COMPONENTS

See also.

`roadmap` — phased grid of deliverables across workstreams without continuous spans

`kanban` — current state by stage rather than schedule by lane

`list-steps` — sequential process with descriptive steps, no parallel lanes
