

LAYOUT STUDIES • 2026

Tabular Lists.

One base class, four visual variants, five fine-tuning modifiers

CONCEPT 01 • LEDGER

**Hairline-ruled rows. Display-serif
name. Mono meta. The quiet
boardroom accounting look.**

The six signal dimensions, what they measure, and how they are scored.

01	Confidence	Number of independent sources corroborating the signal	1-5 · AUTO-SCORED
02	Recency	Time-decay from signal date, configurable half-life	0.0-1.0 · AUTO-SCORED
03	Relevance	Alignment to current strategic bets, owner-scored	1-5 · MANUAL
04	Reach	Number of customers or segments affected	1-5 · AUTO-SCORED
05	Effort	Engineering and design cost to act on the signal	1-5 · MANUAL
06	Confidence delta	Change in confidence score since last cycle	-5 TO +5 · AUTO

Eight engineering metrics tracked weekly.

01	Deploy frequency	Production deployments per developer per week	TARGET • >5
02	Lead time	Commit to production duration, ninety-fifth percentile	TARGET • <8H
03	Change failure rate	Deploys requiring rollback or hotfix, thirty-day window	TARGET • <5%
04	Time to restore	Incident detection to resolution, median	TARGET • <30M
05	Test coverage	Lines covered by automated tests, CI gate	TARGET • >85%
06	Bundle size	Web bundle gzipped on the main route	TARGET • <250KB
07	Error budget	SLO error budget remaining, monthly window	TARGET • >50%
08	Page load p95	First contentful paint from field measurement	TARGET • <1.5S

CONCEPT 02 • DEFINITION

**Name is the visual star. Big display-
serif headline, supporting body
alongside.**

The four governance principles, defined.

01	PRINCIPLE 01 Reversibility	Decisions should be undoable without architectural surgery.
02	PRINCIPLE 02 Optionality	Preserve future choices when the present cost is similar.
03	PRINCIPLE 03 Locality	Place decisions close to the people executing them.
04	PRINCIPLE 04 Calibration	Track decision outcomes and update priors accordingly.

What we mean when we use these terms.

01	GLOSSARY Pilot	A time-bound deployment with one design partner and a kill-switch.
02	GLOSSARY GA	Generally available — self-serve onboarding without sales involvement.
03	GLOSSARY Land and expand	Initial seat-count contract that grows via usage-based pricing.
04	GLOSSARY Multi-tenant	Single deployment serving multiple isolated customer datasets.

CONCEPT 03 · METRIC

**Meta is the column. Each row
anchors a stat tile on the right.**

Quarterly OKR scorecard.

01	Net retention	Trailing twelve months gross retention plus expansion	132%
02	New ARR	New business closed across all segments	\$14.2M
03	CSAT	Customer satisfaction, rolling sixty-day average	8.6/10
04	NPS	Net promoter score from sampled quarterly surveys	+42
05	Time to value	Median days from signup to first integration	4.1d
06	Gross margin	Revenue minus cost of revenue, GAAP	76%

The five hero numbers from this quarter.

01	Net new ARR	Of which \$9.4M came from expansion within existing accounts	\$14.2M
02	Logo retention	Trailing twelve months, all segments	97%
03	Pipeline coverage	Forward two quarters at current win rate	4.2x
04	Sales cycle	Median first-touch to signature, enterprise tier	42d
05	Burn multiple	Net cash burned per dollar of net new ARR	0.8

CONCEPT 04 · SPEC

**Mono names like keys. The
technical-reference feel.**

The platform API surface, at a glance.

01	assets.create	Upload a binary blob and receive a content-addressed ID	POST · V1
02	assets.read	Fetch the asset by ID, with optional range request	GET · V1
03	assets.delete	Soft-delete with seven-day retention and audit log	DELETE · V1
04	assets.list	Paginated listing filtered by owner, tag, or date	GET · V1
05	webhooks.subscribe	Register a callback URL for asset lifecycle events	POST · V1

Five public capabilities, each gated by feature flag.

01	ml.embeddings Vector embedding service accepting any text or image input, returning a 1536-dimension vector for semantic search and clustering downstream.	FLAG · ML_V2
02	notifications.batch Bulk notification dispatch with template support, per-recipient personalisation, and idempotent retry semantics on the channel side.	FLAG · NOTIFY_BATCH
03	exports.streaming Stream-based CSV and Parquet export pipeline with backpressure, resumable from a cursor token after partial failures.	FLAG · EXPORTS_V3
04	auth.sso.saml SAML 2.0 single sign-on with both IdP-initiated and SP-initiated flows; supports multi-factor enforcement on the IdP side.	FLAG · AUTH_SAML

CONCEPT 05 • REGISTER

Categorical meta as a pill. For risk
logs, decision registers, status
tables.

The risk register, as of this quarter.

01	Supplier concentration	Single-vendor exposure on the storage tier	WATCH
02	Talent retention	Platform team attrition above industry benchmark	MITIGATE
03	Regulatory drift	EU AI Act timeline shorter than originally planned	PLAN
04	Customer concentration	Top three customers exceed thirty percent of ARR	WATCH
05	Currency	Euro exposure unhedged beyond a six-month horizon	ACCEPT

Open architectural decisions, awaiting closure.

01	Storage layer	Columnar versus hybrid — affects query and ingest costs	ADR-014
02	Multi-region	Active-active versus active-passive across U.S. East and EU	ADR-015
03	Identity	In-house IdP versus federated — affects compliance scope	ADR-016
04	Schema evolution	Versioned envelopes versus append-only fields	ADR-017
05	Async runtime	Workers versus serverless for long-running jobs	ADR-018

Pick the two you want to keep.

The rest go in the drawer.
