

[X] [-] [] [/] · FOUR SHAPES · FOUR LAYOUTS · ONE .HEAT OVERLAY

State tokens — universal grammar.

The same authoring grammar paints every state-bearing layout in Lattice.

Shape is the primary channel — readable in greyscale, unambiguous for colour-blind viewers. Colour resolves from the layout context; the `.heat` modifier flips the palette globally.

THE FOUR STATES THE ENGINE KNOWS

Shape is the universal channel. Colour is layout-contextual.

`[x]` filled disc · `[-]` half-filled disc · `[ ]` outline disc · `[/]` filled disc with diagonal slash. Two tiny SVG masks paint the half and the slash — no font dependency, no Unicode glyphs, no OS rendering quirks. Each layout binds the four shapes to its own semantic colour palette (performance, lifecycle, or coverage). `.heat` reframes the palette as a load/risk axis without changing the shape grammar.

Phase 1 acceptance, by item.

- Codebook signing in production
- HSM-anchored audit trail
- ◐ TTL refresh under cold-start load — *open, see slide 27*
- Multi-tenant operation — *Phase 2*
- ◑ Cross-region replication — *deferred to Phase 3*

Done · in progress · not done · out of scope. [] reads as a clear todo; [/] reads as explicitly outside this phase.

Vendor evaluation — codebook signing.

Vendor A

- FedRAMP High
- HSM-backed
- ◐ SLA 99.9 (99.95 needed)
- ◉ Multi-region today

Mature platform; SLA gap is the blocker.

Vendor B

- FedRAMP High
- ◐ HSM optional add-on
- SLA 99.95
- ◐ Multi-region (roadmap Q4)

SLA strong; HSM add-on cost pending.

Vendor C

- ◉ FedRAMP Moderate only
- HSM-backed
- SLA 99.95
- Multi-region today

Strong tech; FedRAMP gap rules them out.

Pick — Vendor B

One signed contract by Q3 close.

Pass · partial · fail · N/A. The verdict pill carries the universal shape.

Privacy obligations across regimes — neutral grid.

REGULATION	NOTICE	CONSENT	RETENTION	BREACH	DSAR

LGPD					
PIPEDA					
HIPAA					
GLBA					

Applies · partial · exempt · waived. [/] covers obligations that no longer apply (repealed, waived, or out of jurisdiction).

Codebook programme — **workstream × phase.**

WORKSTREAM	Q1 2026	Q2 2026	Q3 2026	Q4 2026
Signing	SHIPPED Pilot	SHIPPED Production	IN FLIGHT Hardening	PLANNED Audit
HSM	SHIPPED Procurement	SHIPPED Integration	SHIPPED Failover	PLANNED DR drill
Multi-tenant	PLANNED Design	PLANNED Build	IN FLIGHT Pilot	PLANNED GA
Cross-region	OUT OF SCOPE Deferred	OUT OF SCOPE Deferred	PLANNED Design	IN FLIGHT Pilot

Shipped · in flight · planned · out of scope. The lifecycle axis is layout-native; the same shape vocabulary applies.

Same matrix — heat overlay reads as regulatory burden.

REGULATION	NOTICE	CONSENT	RETENTION	BREACH	DSAR
GDPR					
CCPA/CPRA					
LGPD					
PIPEDA					
HIPAA					
GLBA					

Same markdown, palette flipped. Red cells = action items; green = relief. The shape grammar is unchanged — `.heat` is purely a colour overlay.

Same roadmap — heat overlay reads as workload pressure.

WORKSTREAM	Q1 2026	Q2 2026	Q3 2026	Q4 2026
Signing	SHIPPED Pilot	SHIPPED Production	IN FLIGHT Hardening	PLANNED Audit
HSM	SHIPPED Procurement	SHIPPED Integration	SHIPPED Failover	PLANNED DR drill
Multi-tenant	PLANNED Design	PLANNED Build	IN FLIGHT Pilot	PLANNED GA
Cross-region	OUT OF SCOPE Deferred	OUT OF SCOPE Deferred	PLANNED Design	IN FLIGHT Pilot

Shipped now reads as alarm — finished workstreams that are still under load; planned reads as relief — not started, no pressure yet. The same `heat` modifier works on any state-bearing layout.

One grammar, four shapes, every layout.

*[x] [-] [] [/] — universal. SHAPE carries the meaning;
COLOUR carries
reinforcement. Two SVG masks total, no font dependency. `.heat`
flips the
palette globally without touching the markdown. Every state-
bearing
layout speaks the same vocabulary.*
