

COMPOSITION MODEL · THE DECK-WIDE TOGGLE

Slides as Form

A slide is a Frame plus a fixed set of Cells. One front-matter flag — `form: standard` — enables the whole model across the deck: the masthead band, a populated bay, a footer progress rail, and section watermarks. Palette-blind, across every render path.

SECTION 01

The Lift

One flag turns the model on for the whole deck.

CONFIDENTIAL

`form: standard` resolves to the `form` class on every eligible slide — so the band, bay, and rail just appear. Bookends (this section's divider, the title, the closing) are skipped automatically; a single slide can opt out with `no-form`.

The band composes with components untouched.

Body stays a section child

Cards, lists, charts, and tables remain direct children of the section, so every `section.X > ...` selector keeps matching.

Only the masthead moves

The eyebrow and first heading lift into the band; the rest is left exactly where the author put it.

Skipped where it shouldn't apply

Bookends, `math` / `compare-code`, the sovereign split layouts, and imagery are left alone.

SECTION 02

The Bay

The flag resolves identically across every render path.

THE TOGGLE BECOMES THE FORM CLASS IN MARP-CLI AND THE EMULATOR ALIKE – ONE ELIGIBILITY HELPER, ONE SOURCE.

0

SLIDES HAND-TAGGED

The bay docks the meta and status Tiles.

WIP

KEY INSIGHT

Key insight: the **meta:** line and a status chip (this slide is **wip**) ride the bay — no per-slide **form** token needed, the deck flag supplies it.

SECTION 03

Orientation

The footer orients the audience.

The progress Tile reads the deck's **divider** slides as sections and stamps a dot-rail into the footer centre of every Form slide — current section elongated and accented. The watermark echoes the section number behind this text.

One flag, the whole model.
