

ANCHOR · DIVIDER · PROSE

subtopic

Sub-section boundary — lighter than divider, no canvas reskin.

THE FRAMEWORK · COMPONENT 02

Before we can score a signal, we have to agree on what one is.

MODULE 04

Then the next sub-topic, numbered automatically.

THE FRAMEWORK · COMPONENT 02

Before we can score a signal, we have to agree on what one is.

THE FRAMEWORK · COMPONENT 02

Before we can score a signal, we have to agree on what one is.

THE FRAMEWORK · COMPONENT 02

Before we can score a signal, we have to agree on what one is.

When NOT to reach for subtopic.

Used as a divider replacement. If the next slides are an entirely new section, reach for divider (dark canvas, h1). Subtopic is for sub-section orientation, not section starts.

Stacked subtopics. Two subtopic slides back-to-back means the first didn't introduce anything. Merge them or move directly to content.

h1 instead of h2. The layout expects h2 (subtopic name is one level below the section title). Promoting to h1 makes the slide compete visually with the divider.

RELATED COMPONENTS

See also.

`divider` — major section starts — darker, h1, dedicated canvas

`title` — opens the deck — same dark-bookend chrome as divider

`content` — the body slides that follow a subtopic
