When NOT to reach for matrix-2x2.

Continuous-axis data. If items have x/y coordinates rather than quadrant labels, use `quadrant`. `matrix-2x2` is author-placed categorical, not plotted.

Empty quadrants left blank. An empty cell still needs a label or an explicit (none) placeholder. A missing card breaks the 2×2 symmetry.

More than 4 items per cell. Each quadrant holds 1–4 items. Past that the cells crowd. Promote inner items to their own slide if needed.

RELATED COMPONENTS

See also.

- `quadrant` — items have continuous x/y coordinates rather than discrete quadrant labels
- `verdict-grid` — options scored across more than two dimensions
- `obligation-matrix` — many rows × many columns of state-marker cells
- `cards-grid` — the items don't divide along two axes
