

PROGRESSION · LEDGER · STRUCTURE

list-criteria

Numbered criteria list — each requirement is a row with rationale.

What a vendor must clear before procurement signs.

01

SOC 2 Type II

A current report with no exceptions in the security or availability criteria.

02

Data residency

Customer data stays in-region; every sub-processor is disclosed and contractually bound.

03

Exit guarantee

Full data export in a documented format, available without opening a support ticket.

04

Breach notification

A 72-hour notice obligation written into the contract, not the marketing page.

05

Uptime history

Twelve months of published status at 99.9% or better, verifiable independently.

When NOT to reach for list-criteria.

Parallel options, not gates. If the items are alternatives the audience is choosing between, use `cards-grid` or `verdict-grid`. list-criteria is for requirements all of which must hold.

Rationale longer than two lines. Each row is a one-sentence rationale. If a criterion needs a paragraph, lift it to `list-steps` or `split-brief` where the body has room to breathe.

Missing criterion title. The lead line on each li — rendered bold automatically — is what makes the ledger scannable. A naked sentence per row reads as paragraph soup; the title is the structure.

RELATED COMPONENTS

See also.

- `list-steps` — rows are procedural steps with longer body, not gating criteria
- `checklist` — rows carry done/in-flight/planned state markers
- `verdict-grid` — options scored against shared criteria
- `principles` — tenets or values rather than gates a decision must clear
- `list-tabular` — rows carry structured metadata alongside the name and description
