

LATTICE · A DISCREET BRAND MARK IN TWO LINES OF FRONT MATTER.

Custom Logo

A theme-aware silhouette in the top-right corner — auto-adapting to dark and light canvases without per-author variants.

How it works.

The image becomes a CSS `mask-image`. Lattice paints the silhouette in `currentColor` at watermark opacity, so the mark inherits whatever ink the active slide uses — white on the dark title canvas, dark on body slides over a light theme.

One rule in `lattice.css` covers SVG, PNG, and JPEG. No per-author light/dark variants required.

AND

— same shape Marp uses for

When to use which style.

4

Body slide on a light canvas with **bg-sweep**.

5

SVG-mark background + logo coexist.
