

IMAGERY · PANEL · MIXED

featured

Featured card + sub-grid — one prominent item with supporting cards.

Where the next quarter of effort goes.

The scoring-model rewrite.

The flagship bet. Replaces the spreadsheet everyone quietly keeps a private copy of with one model the steering committee can argue over in a single place. Two quarters, and the source of at least four future retrospectives.

Weekly signal review.

Thirty minutes that retire three Slack threads and a hallway debate. One quarter.

The decision log.

Every call recorded with the bet it made. Eighteen entries so far, against roughly 340 decisions. One quarter.

Calibration cadence.

A monthly look at predicted outcomes versus actual ones. The meeting exists.

After the audit, the recommendation lands on the right.

Bundler concatenates CSS at build time.

Per-component sources combine into the shipped lattice stylesheet via the build-css tool.

Manifests are the single source of truth.

Scaffolder, snippets, this gallery, and docs all read from the same JSON.

Tests stay scoped.

One test file per component under the components test path.

Self-contained component folders.

One folder per component holding manifest, styles, transform (if needed), example, and README. Matches the pattern every mature design system uses, and lets the scaffolder, bundler, and docs generator read a single source of truth.

When NOT to reach for featured.

Equal-weight options. If all four items deserve the same weight, use `cards-grid`. featured demands a winner; without one the layout overstates the lead and the audience feels manipulated.

Hero card with one-line body. A one-sentence featured card defeats the asymmetry — the sub-grid bullets out-mass it. Either give the hero the paragraph it needs or move to `cards-grid` where every card holds equal weight.

Sub-grid that argues against the hero. If the supporting cards undermine the recommendation, the slide is a debate, not a verdict. Use `verdict-grid` for criteria-based scoring or `cards-side` for explicit two-option comparison.

RELATED COMPONENTS

See also.

`cards-grid` — all options carry equal weight; no winner declared

`verdict-grid` — options scored against shared criteria, not picked

`cards-side` — two options side by side, no hierarchy between them

`decision` — the recommendation needs an explicit pro/con frame

`split-brief` — the recommendation is a thesis sentence + supporting findings
