# checklist

Items with state markers — done, partial, todo.

## Go-live readiness for the framework rollout.

- ☒ Signal taxonomy ratified, in workshop four of three
- ☒ Scoring weights agreed by the steering committee
- ☒ Decision log live in staging
- ☐ Pilot teams trained, two still "circling back"
- ☐ Operating rhythm on the calendar, attendance optional in practice
- ☐ Exec sponsor confirmed for the launch comms
- ☐ Per-team weighting UI, descoped to next half

## When NOT to reach for checklist.

**All-done lists.** If every item is `[x]` the state markers are decoration. Use `list` or `tldr` for celebratory recaps; checklist earns its weight when the mix matters.

**Long per-item prose.** Each item is one short line. If a row needs a sentence of explanation, the right home is cards-stack or list-tabular.

**Custom state markers.** Only `[x]`, `[-]`, `[ ]`, and `[/]` (out-of-scope, struck through) map to the glyph palette. Authoring `[?]` or `[!]` renders as literal text and breaks the visual contract.

# See also.

## *RELATED COMPONENTS*

`list` — items have no state — just bullets

`tldr` — summary lines without per-item completion tracking

`list-tabular` — rows need a label-plus-description structure, not state

`cards-stack` — each item needs two sentences of body
