

INVENTORY · LEDGER · STRUCTURE

list-tabular

Hairline-ruled ledger of items — name on the left, body on the right.

The five workstreams carrying the transformation.

01	Framework	The scoring model, the signal taxonomy, and the weights nobody quite agrees on.	TWO ANALYSTS · SHIPS Q3
02	Adoption	Onboarding every team to the weekly ritual and the decision log.	ONE ENABLEMENT LEAD · SHIPS Q3
03	Governance	The operating rhythm, the review cadence, and the escalation path.	ONE CHIEF OF STAFF · SHIPS Q4
04	Tooling	The intake form, the dashboards, and the exports for the board.	ONE PM · SHIPS Q4
05	Change	Comms, exec sponsorship, and the people who preferred the old way.	ONE COMMS PARTNER · SHIPS Q4

The four layers of the design system.

- | | | |
|----|---|---|
| 01 | <small>PURPOSE</small>
Function | Why the slide exists — the communication job it does. Seven families. |
| 02 | <small>COMPOSITION</small>
Form | The spatial shape the slide takes. Eleven shapes. |
| 03 | <small>DATA</small>
Substance | The kind of content that fills the shape. Four contracts. |
| 04 | <small>TREATMENT</small>
Finish | The palette, typography, and chrome applied last. Theme-controlled. |

Renderer parity — current scoreboard.

01	Marp CLI build path	334 / 334
02	lattice-emulator inline path	334 / 334
03	marp-vscode runtime DOM path	327 / 334
04	Cross-renderer page-count parity	pass

Environment flags the build path reads.

01	Override the deck's declared theme at build time. Default: theme from front-matter.	LATTICE_THEME
02	Toggle the render helper's hash-keyed cache. Default: 1 locally, 0 on CI.	LATTICE_CACHE
03	Emit per-slide transform timing to stderr. Default: 0.	LATTICE_TRACE

Active components — release status.

01	cards-grid	STABLE
02	split-brief	STABLE
03	radar-chart	BETA
04	quadrant-chart	BETA
05	kanban-board	ALPHA

Finish | The palette, typography, and chrome applied last. Theme-controlled. |

Quarterly headline metrics.

01	Net new ARR	\$4.2M
02	Logo retention	94%
03	Time-to-value (median)	11d
04	Pipeline coverage	3.2x

API endpoints exposed by the deck-server.

-
- | | | |
|-----------|---|-------------------------------|
| 01 | Returns the rendered deck metadata, slide manifest, and signed PDF URL. | GET /DECK\$/400 |
| 02 | Enqueues a re-render. 409 if a render is already in flight for this deck. | POST /DECKS/:ID/RENDER |
| 03 | Evicts the cached PDF and forces a cold re-render on the next read. | DELETE /DECKS/ID/CACHE |

When NOT to reach for list-tabular.

Three or fewer rows. The ledger needs density to justify its shape. For two or three items, reach for cards-stack or cards-wide — the rows get the room to breathe.

Long per-row prose. Each row is a name plus a sentence. If the description runs two or three sentences, move to cards-wide or split across slides.

Stacking two primary variants. `def`, `metric`, `spec`, and `register` are mutually exclusive. Pair each only with its secondary modifier (`def+rule`, `metric+solid`, `spec+stacked`, `register+outline`).

See also.

RELATED COMPONENTS

`glossary` — term/definition pairs with auto-derived range pill

`cards-stack` — two or three richer items, not a ledger

`actors` — the left column is a named person, not a key

`principles` — rows are stated rules, not reference entries

`list` — rows are bullets without a label-plus-description shape
