

2 COMPONENTS

# imagery

Imagery — visuals that carry their own meaning.

Applying the criteria, here is where the evidence points.

## **Self-contained component folders.**

One folder per component holding manifest, styles, transform (if needed), example, and README. Matches the pattern every mature design system uses, and lets the scaffolder, bundler, and docs generator read a single source of truth.

## **Bundler concatenates CSS at build time.**

Per-component sources combine into the shipped lattice stylesheet via the build-css tool. Committed bundle with a CI gate.

## **Manifests are the single source of truth.**

Scaffolder, snippets, this gallery, and docs all read from the same JSON.

## Image right is the default — text leads, evidence follows.

The image fills its half-canvas slot edge-to-edge. A 1px hairline marks the join between text and image — boardroom polish, no placeholder pattern visible behind a real photo. Replace the bg image directive with your own asset.
