word-cloud

Spiral-packed word cloud — items sized by weight.

What 38 win/loss interviews kept saying, by frequency.

What this branch named, by weight.

A word cloud constellation diagram with the words arranged in a circular pattern. The words are: 'function' (brown), 'gallery' (grey), 'form' (brown), 'manifest' (blue), 'substance' (grey), and 'component' (blue). The word 'component' is the largest and is positioned in the center-left. 'function' is at the top, 'gallery' is at the top-right, 'form' is at the right, 'manifest' is at the bottom-right, 'substance' is at the bottom-left, and 'component' is at the left.

function gallery
component form

Stress test — 20 terms, raw frequency counts (512 → 5).

What 38 win/loss interviews kept saying, by frequency.

What 38 win/loss interviews kept saying, by frequency.

What 38 win/loss interviews kept saying, by frequency.

When NOT to reach for word-cloud.

Precise comparisons.

If the audience needs to know that 'manifest' is 1.6× 'function', the spiral packing actively misleads. Use

or a bar chart where the eye can compare lengths directly.

progress

Two or three words.

A three-word cloud is a list with extra steps. Use

for a metric row or

stats

for a single weighted headline.

big-number

Multi-word phrases.

Each li should be a single token. Multi-word phrases blow out the layout and crowd the spiral; if your data is phrases, normalise to keywords first or use

for verbatim text.

RELATED COMPONENTS

See also.

- `progress` — the weights need precise visual comparison
- `stats` — the headline metrics are independent numbers, not a corpus
- `piechart` — the items are parts of a whole, not free-form themes
- `quote` — the verbatim language matters more than the frequency
- `list` — single-line takeaways — the `takeaway` variant
