big-number

Single oversized number as the focal claim.

NET NEW ARR · FY26 THROUGH Q3

\$48M

booked against a \$42M full-year plan,
with the enterprise segment driving
two-thirds of the gain and one quarter
still to close.

When NOT to reach for big-number.

Multiple metrics on one slide. Two big numbers on one canvas dilute both. Use `stats` for a row of three metrics or `kpi` for a grid of four; reserve big-number for genuinely solo claims.

Caption longer than one line. If the caption needs a sentence to explain, the number isn't carrying the slide. Either trim the number's claim or move to `content` where prose has room.

Decorative numbers without an argument. "99.99% uptime" by itself is a boast, not a claim. Big-number works when the number is the answer to a question the audience came in with.

See also.

RELATED COMPONENTS

`stats` — row of 2-3 metrics, comparable visual weight

`kpi` — grid of 4-6 metrics with status indicators

`split-metric` — the metric needs a paragraph of context alongside it

`content` — the argument is mostly prose with a number embedded
