

FEATURE DEMO • FINISHES

A backdrop, set once.

A *finish* is the surface of a deck — the wax-and-polish layer over its structure and palette. Set `finish: blueprint` in front matter and every slide wears the same faint drafting grid. This title opts out with `backdrop-none`.

The finish is a register, not per-slide markup.

`finish:` names the whole-deck surface in one token — orthogonal to `theme:`, which still owns the palette. The engine reads it once and paints the backdrop behind every slide, so you never repeat a class.

Palette-blind

Every backdrop is `color-mix()` of the theme accent — swap the theme and it recolors itself.

Export-safe

Pure CSS gradients (never masks), so the grid survives the PDF and PPTX.

Legible by design

The accent stays faint, so text keeps its AA contrast with no scrim.

Five field backdrops ship in v1.

Wash

A soft accent bloom from the top edge.

Aurora

A two-corner glow for a sense of depth.

Blueprint

A graph-paper grid — the drafting-table finish.

Dots

A quiet dot grid behind your content.

Hatch

Diagonal accent hatching, textured and energetic.

A slide can override the deck.

This slide carries `_class: backdrop backdrop-dots`, so its dot field replaces the deck-wide blueprint grid for one slide. Per-slide wins; the rest of the deck keeps its grid.

How the backdrop is wired.

- 01 Front matter declares `finish: blueprint` `once`
.....
- **The engine appends** `backdrop backdrop-blueprint` `every slide`
.....
- 03 The compositor paints it into the section `behind content`
.....
- 04 A slide opts out with `backdrop-none` `per-slide`
.....
- 05 The deck-lint guards typos `unknown-finish`
.....

It composes with everything.

Pick it in the Studio.

The Studio's Inspector has a **Finish** field — swatch-previewed, grouped Plain and Backdrops — that writes this `finish:` register for you, with the live preview updating as you choose. This slide is clean (`backdrop-none`).

ONE LINE TO RE-SURFACE THE ROOM

Change the finish, keep the content.

Flip `finish:` to `wash`, `dots`, or `boardroom` and the same Markdown ships
with a new surface — no edits to a single slide.
