

STATEMENT · PANEL · STRUCTURE

split-list

Featured left panel + supporting list on the right.

A featured statement on the left lands the argument.

Default · split-list

USE WHEN

One claim deserves emphasis

The panel headline carries the weight; the right side substantiates.

You need both a thesis and proof

Statement on the left, evidence list on the right.

The right side is short

Three to four supporting points; longer lists belong in cards-stack.

The mirror modifier flips it

Image-style decks often want the panel on the right.

USE WHEN

Decks with image slides

Image bleed sits left; the panel reads as a closing statement on the right.

Alternating visual rhythm

Pair a default split-list and a mirrored one across a section to keep the eye moving.

Right-to-left framing

The argument reads more naturally when the claim follows the evidence rather than preceding it.

And the same claim, now with the panel on the right.

When NOT to reach for split-list.

Longer than four points. If the right side runs past four points, the panel and list lose balance. Move to [cards-stack](#) for longer lists or split into two slides.

No panel headline. The dark panel exists to carry a statement. An empty or generic heading wastes the strongest visual real estate on the slide.

Stacking many split-list slides in a row. The dark sidebar is a strong visual signal. Three split-list slides back-to-back numbs the audience to it. Intersperse with content or stats.
