

STATEMENT · SPLIT · STRUCTURE

split-statement

Pull quote — half the slide committed to one quoted idea on a dark left panel, supporting list on the right.

The best product does not win. The most understood product does.

Morgan Chase · Head of Product, Vercel, 2024

Default · split-statement

Clarity is a product decision, not a marketing one.

If a prospect cannot articulate our value in one sentence, the product has a communication architecture problem.

Onboarding is the product's first argument for itself.

The moment a user first succeeds defines their frame for everything that follows.

Understanding, not delight, is the retention driver at scale.

Users who understand the system's logic stay through friction. Build for comprehension.

When NOT to reach for split-statement.

Implications that just paraphrase the quote. If the right-panel bullets are restating what the quote said, the slide is doing two jobs that should be one. Either trust the quote (use `quote`) or make implications that genuinely extend it.

Quote shorter than the implications. When the quote is one phrase and the right panel has three paragraphs of body, the visual balance breaks. Either lengthen the quote (within reason) or move to `split-brief` (lede + findings).

No attribution. The inline-code cite line is what makes a pull quote credible. An unattributed quote in a deck reads as the author's invention; attribution earns the visual weight.

RELATED COMPONENTS

- `quote` — the quote IS the slide — no implications needed
- `split-brief` — the left carries a thesis statement, not a quote
- `split-list` — the right side is supporting points, no quoted claim on the left
