

4 COMPONENTS

# progression

Progression — ordered movement through stages or time.

# Customer onboarding · trial to activation.

**P** prospect   **S** sales   **U** user   **O** onboarding

**PAIN** 1 2 3 4 5 **DELIGHT**

# What a vendor must clear before procurement signs.

01

## **SOC 2 Type II**

A current report with no exceptions in the security or availability criteria.

02

## **Data residency**

Customer data stays in-region; every sub-processor is disclosed and contractually bound.

03

## **Exit guarantee**

Full data export in a documented format, available without opening a support ticket.

04

## **Breach notification**

A 72-hour notice obligation written into the contract, not the marketing page.

05

## **Uptime history**

Twelve months of published status at 99.9% or better, verifiable independently.

# What happens in the first hour of an incident, in theory.

## STEP 01

### **Declare and page**

Whoever notices opens the incident channel and pages on-call. Declaring is cheap; a missed page is the line item in the post-mortem.

## STEP 02

### **Assign a commander**

One person owns coordination and communication. They direct the response — they do not debug it, though they will be asked why they aren't.

## STEP 03

### **Stop the bleeding**

Mitigate before diagnosing. Roll back, fail over, or shed load first; find the root cause once customers are safe and the board has logged off.

## STEP 04

### **Communicate on a clock**

A status update every 30 minutes, even when it is "still investigating." Silence is what the retrospective remembers.

# What ships in each phase, assuming the phases survive the next planning offsite.
