

INVENTORY · LEDGER · STRUCTURE

glossary

Two-column term/definition table with auto-derived alphabetic range pill.

Glossary

C - S

TERM	DEFINITION
Component	A self-contained unit at lib/components, one folder per component, with manifest plus styles plus example plus optional transform plus README.
Function	The communication purpose a slide serves; one of seven families (Anchor, Statement, Inventory, Comparison, Progression, Evidence, Imagery).
Form	The spatial composition of a slide; one of eleven shapes (bookend, divider, canvas, grid, stack, ledger, panel, matrix, scatter, timeline, split).
Manifest	The JSON description of a component, consumed by the scaffolder, snippets, docs catalog, and autocomplete.
Substance	The kind of data that fills the form; one of four (prose, structure, series, graph).

When NOT to reach for glossary.

Multi-sentence definitions.

Each entry is one short line. If a definition needs context or examples, the term deserves its own slide — use subtopic with the term as the heading.

Mixed term lengths.

If some terms are single words and others are full phrases, the left column gets ragged. Trim long terms to their canonical short form.

Hand-written range pill.

The runtime derives the range pill (e.g. "A - G") from the entries. Authoring it into the heading double-stamps it.

RELATED COMPONENTS

`list-tabular` — rows are key/value reference, not term/definition

`subtopic` — one term needs a full slide of explanation

`actors` — the left column is a named person, not a term

`principles` — the entries are stated rules, not defined terms
