principles

Declared statements — short stated principles, each with a one-line justification.

How we make calls when the spec is silent.

Default to the cheaper-to-reverse choice. Reversible calls don't need a meeting; only the irreversible ones do.

Name the actor, never the system. "The PM decides" lands; "the process decides" hides accountability.

Write down the bet on the same slide as the choice. The decision and its predicted outcome live together — the calibration loop depends on it.

Form follows function. Let the audience's need shape the layout, not the other way around.

One main idea per slide. If you can't summarise it in one sentence, split it across two slides.

How we resolve conflicts — top wins.

01 Default to the choice that is cheaper to reverse.

02 Name the actor, never the system.

03 Write down the bet on the same slide as the choice.

04 Form follows function.

05 One main idea per slide.

When NOT to reach for principles.

Aspirations, not principles.

"Be empathetic" is a value, not a principle. Principles are decision rules — they say what to do when two options conflict. Reach for content if it's a values statement.

Long per-principle prose.

Each justification is one sentence. If a principle needs a paragraph of context, give it its own slide and let principles act as the index.

Hedged statements.

"We try to default to X" reads as a wish. Drop the hedge — principles are declared, not negotiated. "Default to X" lands harder.

RELATED COMPONENTS

- `actors` — rules attach to named owners, not shared tenets
- `tldr` — single-line takeaways without justification body
- `list` — items are short bullets without title + body shape
- `cards-stack` — each principle needs two sentences of body
